

H-503 Color Developer Synopsis

The H-503 color developer is one dispersion liquid of compound zinc salicylate resin.

With excellent color performance and resistance to light aging, under low temperatures (below 5°C) Still has good color development speed, color light density, Its use effect reaches the international advanced level.

1. Technical indicators:

- I. outward appearance: White emulsion
- II. Solid content: $\geq 45\%$
- III. Viscosity: $\leq 200\text{CPS}$
- IV. PH value: 4.0-6.0

2. Instructions:

- I. The dosage of color developer on coating dry weight is about 12%-15%.
- II. Color developer is suitable for air knife coating, blade coating, curtain coating, etc.
- III. Color developer is anionic emulsion, pls do not use together with cation resin to avoid flocculation.
- IV. Store color developer at 5-35 °C. The quality will change when frozen or above 35 °C.

3. Package:

- 200kgs/drum
- 1000kgs/tank
